

Website Deployment

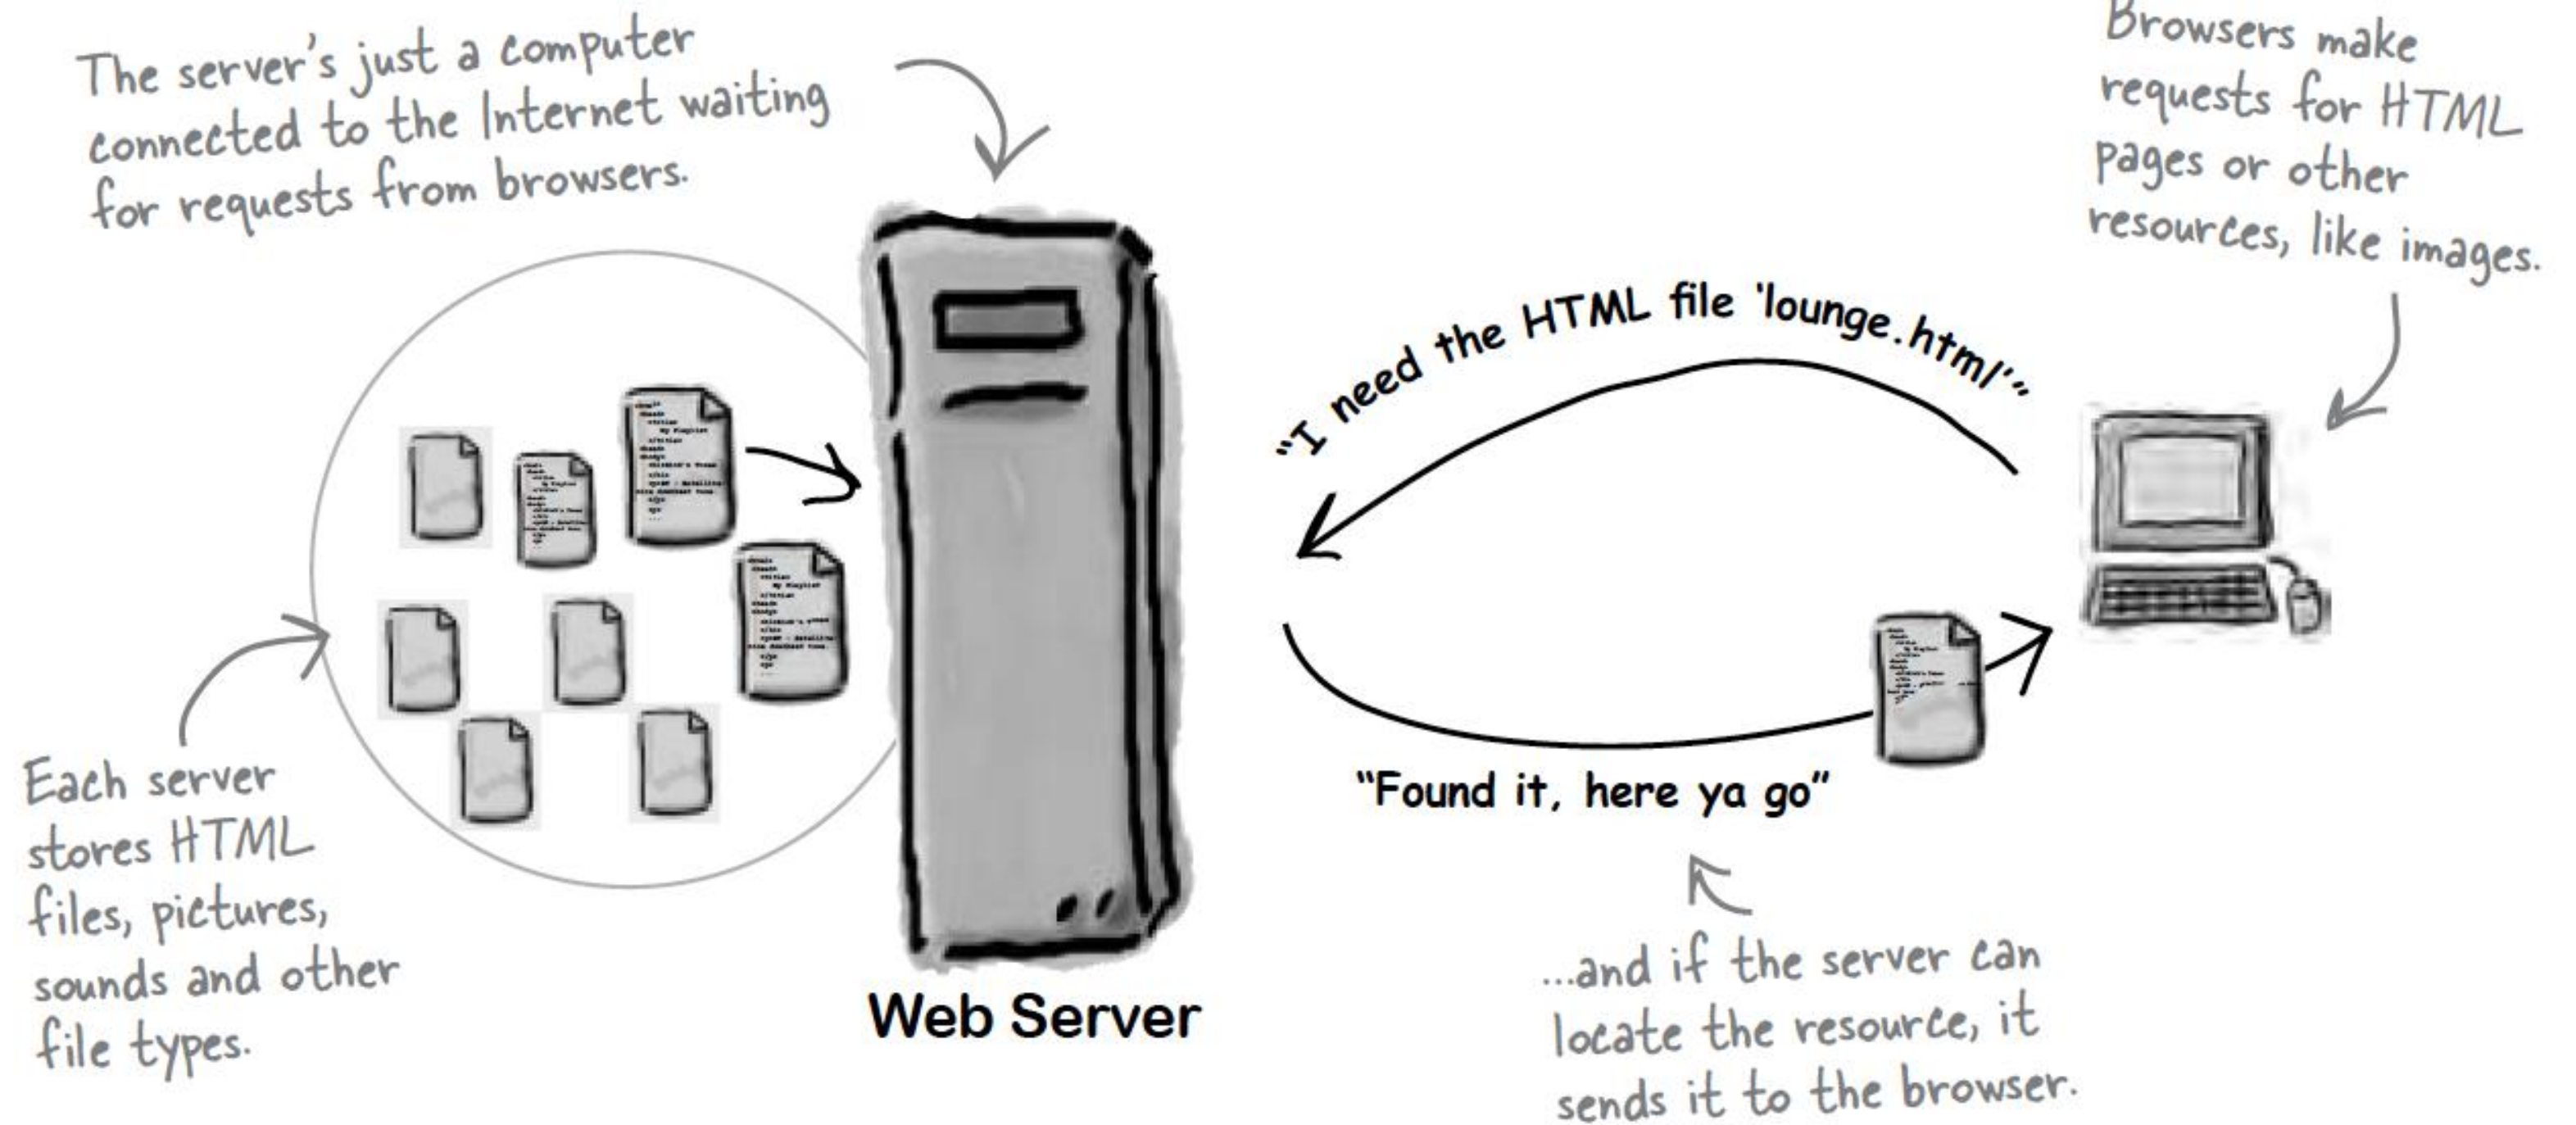

Website Development 1

Clients and Servers

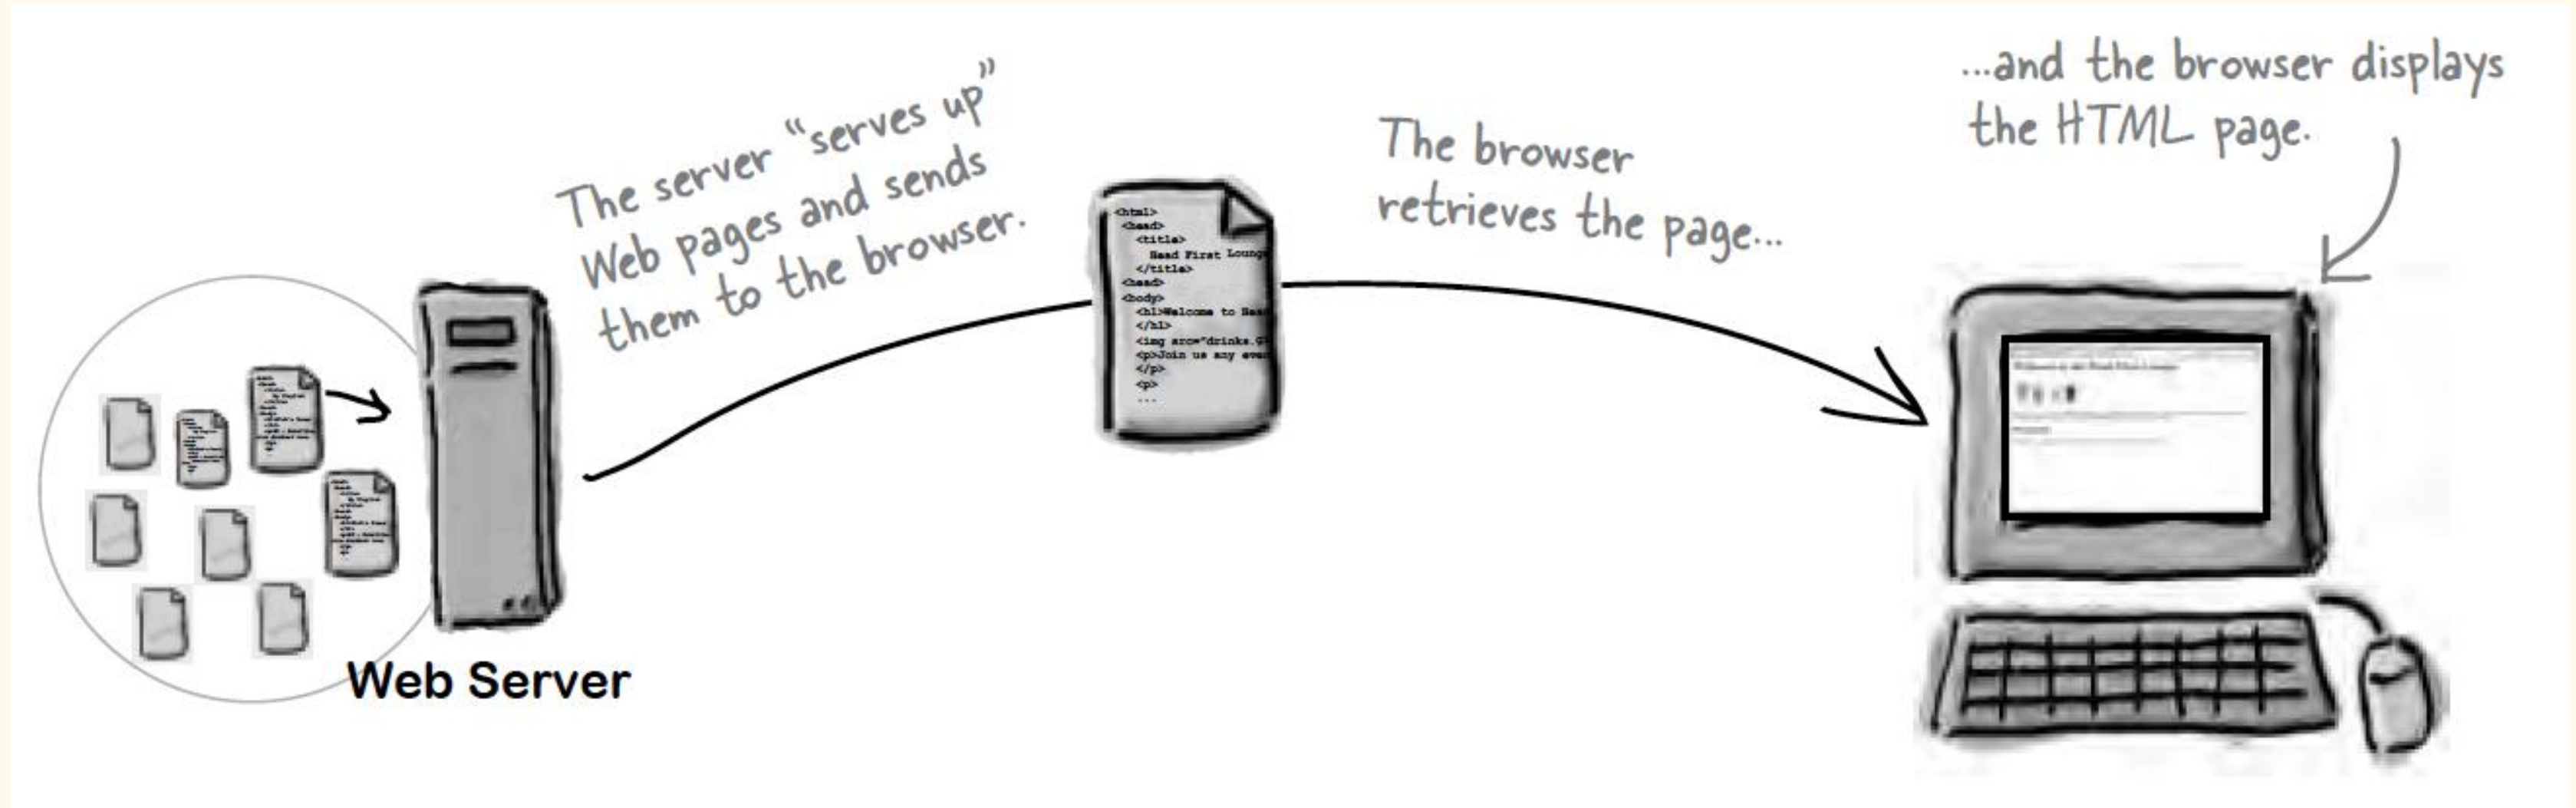

- Client/Server Computing:
 - The interaction between two programs when they communicate across a network.
 - A program at one site sends a request to a program at another site and awaits a response.
 - The requesting program is called a client; the program satisfying the request is called the server.

Role of web Server

Role of Client

Web hosting

- Web hosting means **storing your web site on a public server.**
- Web hosting normally includes **email services.**
- Web hosting often includes **domain name registration.**
- To get your pages on the Web, you need a server that actually lives on the Web full-time.

Web hosting

- For any website to be available online, it has to be stored on some server / computer that is connected to the Internet. That server where you store your website is your host.
- The host could be anywhere in the world but it has to have these simple things:
 - Power
 - Internet connection
 - Dedicated IP address

Web hosting

- Web hosting companies offer different solutions in relation to the disk space and monthly traffic a website will use.
 - Disk space:
 - Simple websites average around 150 MB, but websites with large amounts of audio/video content or storing large amounts of data will need more
 - Monthly traffic (bandwidth):
 - Most sites use 5GB or less each month; however, sites with a lot of visitors will use more

Register .IE domains with Blacknight for €5.99

What extension is right for you?

Renewal rates may differ - [contact us](#) for details

.IE

Identify yourself to the Irish market.

€5.99 for 1st year*

Renews at €31.99

.COM

The global online standard tld.

Alternatives

- There are some alternatives to paid website hosting
 - Free website hosting:
 - Some providers offer a free plan; these are normally quite limited
 - GitHub pages:
 - Create a website directly from a repository on GitHub
 - Netlify:
 - Build and deploy websites from GitHub (and other platforms)

GitHub and Netlify

- In this week's lab, we will:
 - Create a **GitHub** repository to store our Website Development 1 labs
 - Connect this repository to **Netlify**
 - Use Netlify to deploy a website
 - Further updates to the GitHub repository will (almost) instantly appear on our Netlify website
